

HEALTHCARE

Rehabilitate • Relax • Rejuvenate

Aquaroll® provides your practice with a diverse portfolio of options when determining the best way to approach patient challenges. This unique therapy can be used as:

- a supplement to post-surgical rehabilitation
- a supplement to post-fracture rehabilitation
- a supplement to / replacement for prescription drugs
- a non-operative management tool
- a pre-surgery treatment
- an acute injury treatment
- a tool for the reduction of / proper formation of scar tissue
- a long-term pain management system

Better Medicine. Better Practice.

By offering differentiation and improved patient outcomes, Aquaroll® provides a treatment modality that will help:

Attract more therapy referrals

- Increased patient value justifies the oft-seen high co-pays through a disruptive modality not available in most treatment centers

Generate more patient therapy visits per referral by differentiating your center from the competition

- Results can be experienced in as little as one time-efficient treatment session
- Improved patient retention throughout the physician-designated treatment period results in better patient outcomes

Create new physician referrals and increase practice exposure

- Establishing presence as an aquarollUSA treatment center draws community patients, who will recommend and return to the physician practice

Increased Practice Productivity – Physician and Therapist.

Aquaroll® is an indispensable tool to therapist and practice.

- Free up valuable therapist time, enabling increased productivity and efficiency
- Broad indications list allows for usage on most practice patients

The key to successful practice management is pairing the patient with their proper treatment placement. Aquaroll® provides a mechanism for increased patient therapy time and fewer unnecessary in-office physician visits. This allows for a more healthy flow and influx of new patients to the physician while still retaining past patients with the therapist throughout the ideal treatment periods.
